

Static Line & Rail Systems

DEFENDER™

Independently certified safety

Defender™ static line & rail systems

Be certain your fall prevention systems are safe and compliant. Defender static line & rail systems carry **ISO 9001 quality certification** and fully comply with **AS 1891** to be sure you're on the right side of **OHS legislation** and **state law**.

Smart design

The safety of a static line & rail system hinges on its design. Certified Defender™ designers and installers consider the configuration of your plant and rooftop to plan a system that will minimise the risk of falls and the potentially lethal pendulum effect.

The system includes all anchors, harnesses, static lines, lanyards and shock absorbers, design, installation, certification, permit systems, training and rescue plans.

Full compliance and real safety

Defender static line & rail systems are:

- > Certified to AS 1891
- > Layout designed to minimise the risk of a fall (i.e. fall restraint or work positioning)
- > Provided with full documentation, including layouts, rigging plans and user manuals
- > Customised to suit your site's requirements and the way your people work
- > Strong, reliable and built to last
- > Provided by leading manufacturer *Capital Safety*
- > Fixed and installed by Certified *Defender™* Installers
- > Inspected by a *NATA™*-accredited company, *Workplace Access & Safety*

Defender™ ... independently certified safety

The Defender differences add up to static line & rail systems that are remarkably robust, easy and safe to use. But don't just take our word for it: Defender brings the assurance of independently certified safety.

Carrying **ISO 9001 quality certification**, Defender access and safety equipment is designed by engineers, installed by Certified Defender Installers and inspected by **NATA™-accredited** height safety specialists.

Defender static line & rail systems fully comply with **AS 1891**, **OHS legislation** and **state regulations**.

Wide range of static line & rail systems

Defender offers a range of static line & rail systems to suit your site and the way your people work, ensuring safe and efficient fall restraint, fall arrest and work positioning.

ISO 9001 Quality

ISO 9001 is the world's most established quality framework, currently being used by over 750,000 organisations in 161 countries. This standard assures Defender's quality.

Inspected by a NATA™-accredited company

NATA is the authority that provides independent assurance of technical competence through a proven network of best practice industry experts. The criteria for determining a facility's competence are based on the relevant international standard (e.g. ISO/IEC 17025, ISO 15189, ISO/IEC 17020). NATA provides assessment, accreditation and training services to laboratories and technical facilities throughout Australia and internationally. The Defender range of static line systems are inspected by a NATA™-accredited company.

Australian Standards Committee Participation

Defender's manufacturer, **Workplace Access & Safety**, is proud to represent the FMA (Facility Management Association) on the Australian Standards Committee, taking an active role in the development of the Australian Standards for fall arrest systems, and contributing technical expertise for the benefit of the community of industrial safety.

Other **DEFENDER** safety products in the series:

Access Hatches	Rung Ladders
Cooling Tower Platforms	Staircases
Guardrails	Step Type Ladders
Landings & Platforms	Walkways
Roof Anchors	Internal & Suspended Walkways

Get it done right, first time, for less. Defender equipment and installation is extraordinarily cost-effective. Why? Because smart design shouldn't cost extra.
